Limeta 2.5/500

Contains 2.5 mg Linagliptin + 500 mg Metformin

Limeta 2.5/1000

Contains 2.5 mg Linagliptin + 1000 mg Metformin

Linagliptin

Metformin

Linagliptin Along With Diet and Exercise has been Proven to Help Lower Blood Sugar Levels in Adults with Type 2 Diabetes.

Mechanism of action | increasing insulin synthesis and release, decreasing glucagon secretion from pancreatic cells by inhibiting DPP-4 enzyme.

Fewer cardiovascular events | compared to sulfonylurea therapy with no QT interval prolongation.

Metformin is a First-Line Pharmacological Treatment for Patients with Type 2 Diabetes.

Mechanism of action | decreases hepatic glucose production and GI glucose absorption; increases target cell insulin sensitivity.

Weight loss | metformin may help people with diabetes to lose weight by lowering their appetites.

Fewer cardiovascular events | metformin was shown to prevent cardiovascular complications in type 2 diabetes patients.

Improve lipid profile | metformin lowers plasma total cholesterol and TG levels.

Lower A1C | Limeta (Linagliptin + Metformin) has been shown to help lower A1C up to -1.7% in patients.

Limeta Improves | both fasting and postprandial glycemia.
